Portfolio: josephkportfolio.netlify.app GitHub: github.com/joseph101kt LinkedIn: linkedin.com/in/joseph-kakkassery

Full-Stack Developer building production-grade web and cross-platform applications. Delivered real-world client projects using Next.js, React Native (Expo), and Supabase. Proficient in architecting self-managed MERN stack environments Comfortable across the full stack — from database design, building high-performance REST APIs and real-time systems to AI-powered features and frontend UX. Also brings SEO skills, making it easy to ship products that attract users, not just work technically.

SKILLS

Languages: JavaScript, TypeScript, Python, Lua

Frontend: React, React Native, Expo Router, Next.js, NativeWind, Tailwind CSS, Vite

Backend: Node.js, Express, MongoDB (Mongoose), Supabase (Auth, DB, Realtime), PostgreSQL, SQLite3, Cloudinary, LiveKit cloud

Tools: Git, GitHub, VS Code, Android Studio, Postman

Other: Gemini API, Tesseract.js (OCR), Mammoth.js, SEO, Polyglot(English, Hindi, Telugu, Malayalam)

EXPERIENCE

Web Developer · SBMS — South India Bridal Makeover Studio

Aug 2025 – Jan 2026

- Built and shipped two production websites — sbmsacademy.in and simabeautyexpo.com — using Next.js and Supabase
- Developed a full event-registration pipeline: image upload to Cloudinary → instant PDF ticket/ID generation → personalised email delivery
- Created a reusable ticket/ID template generator to let staff produce customised materials without developer involvement
- Built internal web apps for event operations management, including attendee tracking and automated onboarding flows

PROJECTS

MERN MongoDB Document Visualizer — MongoDB, Express, React, Node.js, Tailwind

- Architected a specialized data management tool to bridge the gap between raw MongoDB collections and intuitive UI management.
- Recursive UI Logic: Engineered recursive React components to visualize infinitely nested JSON data structures dynamically.
- Custom REST API: Developed a full suite of GET, POST, PATCH, and DELETE endpoints from scratch using Express and Node.js.
- Data Integrity: Implemented Mongoose schemas to enforce strict data validation within a schema-less NoSQL environment.
- Live App: mern-stack-mongodb-database-visualize.netlify.app

Full-Stack Job Portal — React Native (Expo Router), Supabase, Gemini, LiveKit

- Cross-platform app (web + Android) built with Expo Router in a monorepo structure, deployed to Vercel for web
- Supabase-powered backend: JWT auth, relational DB with full CRUD, and real-time chat via Supabase Realtime
- AI resume parser combining Tesseract.js (OCR for images), Mammoth (DOCX extraction), and Gemini API to structure candidate data automatically
- Integrated LiveKit Cloud for in-app live video interviews using WebRTC with camera/mic controls
- Responsive UI with NativeWind/Tailwind; shared Supabase package across workspace apps
- Link to the project: joseph-k-mobile.expo.app

Anugraha Christian World — Product Catalogue — *Next.js, Supabase, Cloudinary*

- Full-stack product showcase site for a real local retail client (also worked there as a store assistant, giving direct product knowledge)
- Product data served via local JSON + Supabase; images hosted on Cloudinary with URLs stored in the DB — keeping infrastructure costs minimal
- CRUD admin panel for products with slug-based routing (/products/product-name-id) for clean, shareable product URLs
- Products page includes keyword search and tag filtering driven entirely by URL params, enabling bookmarkable and shareable filtered views
- Link to the project: anugrahachristianworld.in

Smart CCTV System — *Python, OpenCV, Tkinter* — *Team Project*

- Human-detection system that records only clips containing confirmed movement, cutting storage usage significantly
- Responsible for the Tkinter GUI and JSON-based settings panel, allowing non-technical users to configure detection sensitivity and recording paths
- Applied background subtraction and contour analysis via OpenCV for reliable motion and presence detection

Slimes vs Sorcerers — 2D Game — *Lua, Love2D*

- Built from scratch in Lua/Love2D: movement, dash, and projectile-firing mechanics with tween-based sprite animation
- Designed a base Enemy class and extended it into six types: fire, poison, ice, stone, and explosive slimes — each with unique behaviours (DoT, slow, freeze, stun, area-of-effect explosion)
- Implemented an enemy spawning system with score-based progression — wave difficulty and enemy variety scale as the player advances
- Added basic pathfinding, a full HUD (hearts, enemy health bars), main/pause/game-over screens, and a loot-drop system (hearts and XP)
- Link to project Demo: youtube.com/watch?v=x14loV1b6fc

EDUCATION

B.Sc. — Computer Science, Microbiology & Zoology

Government City College, Hyderabad | 2023 – 2026

- Building strong foundations in computer science alongside interdisciplinary biological sciences

Intermediate (BiPC) — St. Mary's Centenary Junior College

Score: 914 / 1000

- Achieved high academic performance with a focus on science stream

SSC — St. Francis De Sales High School

GPA: 10 / 10

- Secured perfect GPA, reflecting consistent academic excellence

CERTIFICATIONS

- Harvard — CS50x (Introduction to Computer Science)
- Harvard — CS50P (Python)
- Harvard — CS50 SQL
- Google — Fundamentals of Digital Marketing
- Google — Ads Measurement
- Udemy — 11 platforms in 1 course: Learn Paid Advertising
- Hubspot — SEO Certification
